## **CLAIMS**

A method (300) of configuring, in a router, a physical port for coupling to 1. a network, said method comprising:

receiving (320) a message to configure said physical port for use with said network;

associating (325), responsive to receiving said message, a set of mapping assignments for using said physical port to access said network; and

implementing (330) said mapping assignments, responsive to associating said mapping assignments, to configure said physical port for coupling to said network.

- The method (300) of claim 1, further comprising: 2. storing (340) said mapping assignments.
- 3. The method (300) of claim 1 wherein said network is a Wide Area Network (WAN).
- The method (300) of claim 1 wherein said network is a Local Area 4. Network (LAN).
- The method (300) of claim 1 wherein said network is a Local Area 5. Network (LAN) prior to said step of implementing (330) and is a Wide Area Network (WAN) after said step of implementing (330).
- The method (300) of claim 1 wherein said message is implemented 6. using an Simple Network Management Protocol (SNMP) SET command.
- The method (300) of claim 1 wherein said message is implemented 7. using HyperText Transfer Protocol (HTTP) data.
- The method (300) of claim 1 wherein said message is created after 8. detecting at least one hardware switch setting change.

- 9. The method (300) of claim 1 wherein said message is implemented using a router proprietary command message.
- 10. A router having a physical port for coupling to a network, said router comprising:

means for receiving (320) a message to configure said physical port for use with said network;

means for associating (325), responsive to receiving said message, a set of mapping assignments for using said physical port to access said network; and

means for implementing (330) said mapping assignments, responsive to associating said mapping assignments, to configure said physical port for coupling to said network.

## 11. A router comprising:

processor, memory, and support circuitry (220) having a WAN/LAN port manager (225);

- a LAN interface (130);
- a WAN interface (135); and
- a plurality of physical ports (240) selectively connectable to said LAN interface (130) or said WAN interface (135),

wherein said WAN/LAN port manager (225) controls whether each of said plurality of physical ports (240) is coupled to said LAN interface (130) or said WAN interface (135).
